VoltCap v0.6.66 — Popup visual & animation review (update 443)

Devices: AYN Odin 2 Portal (1920×1080, Android 13) and KONKR/ARBOR GT78 (960×640, Android 11). Build: release from commit 8a087e3 + update 443 fixes. Layouts: Wii Channel (Channel grid), Case stacks, Disc station, Twin desk, Cinema, Arctic hub, Cross menu × popup styles Own / Banner / Row opens up / Row reveal / Shared move / Classic. Captured with launches blocked (voltcap_test_nolaunch) — no game was started. Games in the captures: Odin "Donkey Konga 2" (GameCube), GT78 "It's Mr. Pants" / "Pokemon Adventure Red Chapter" (GBA).

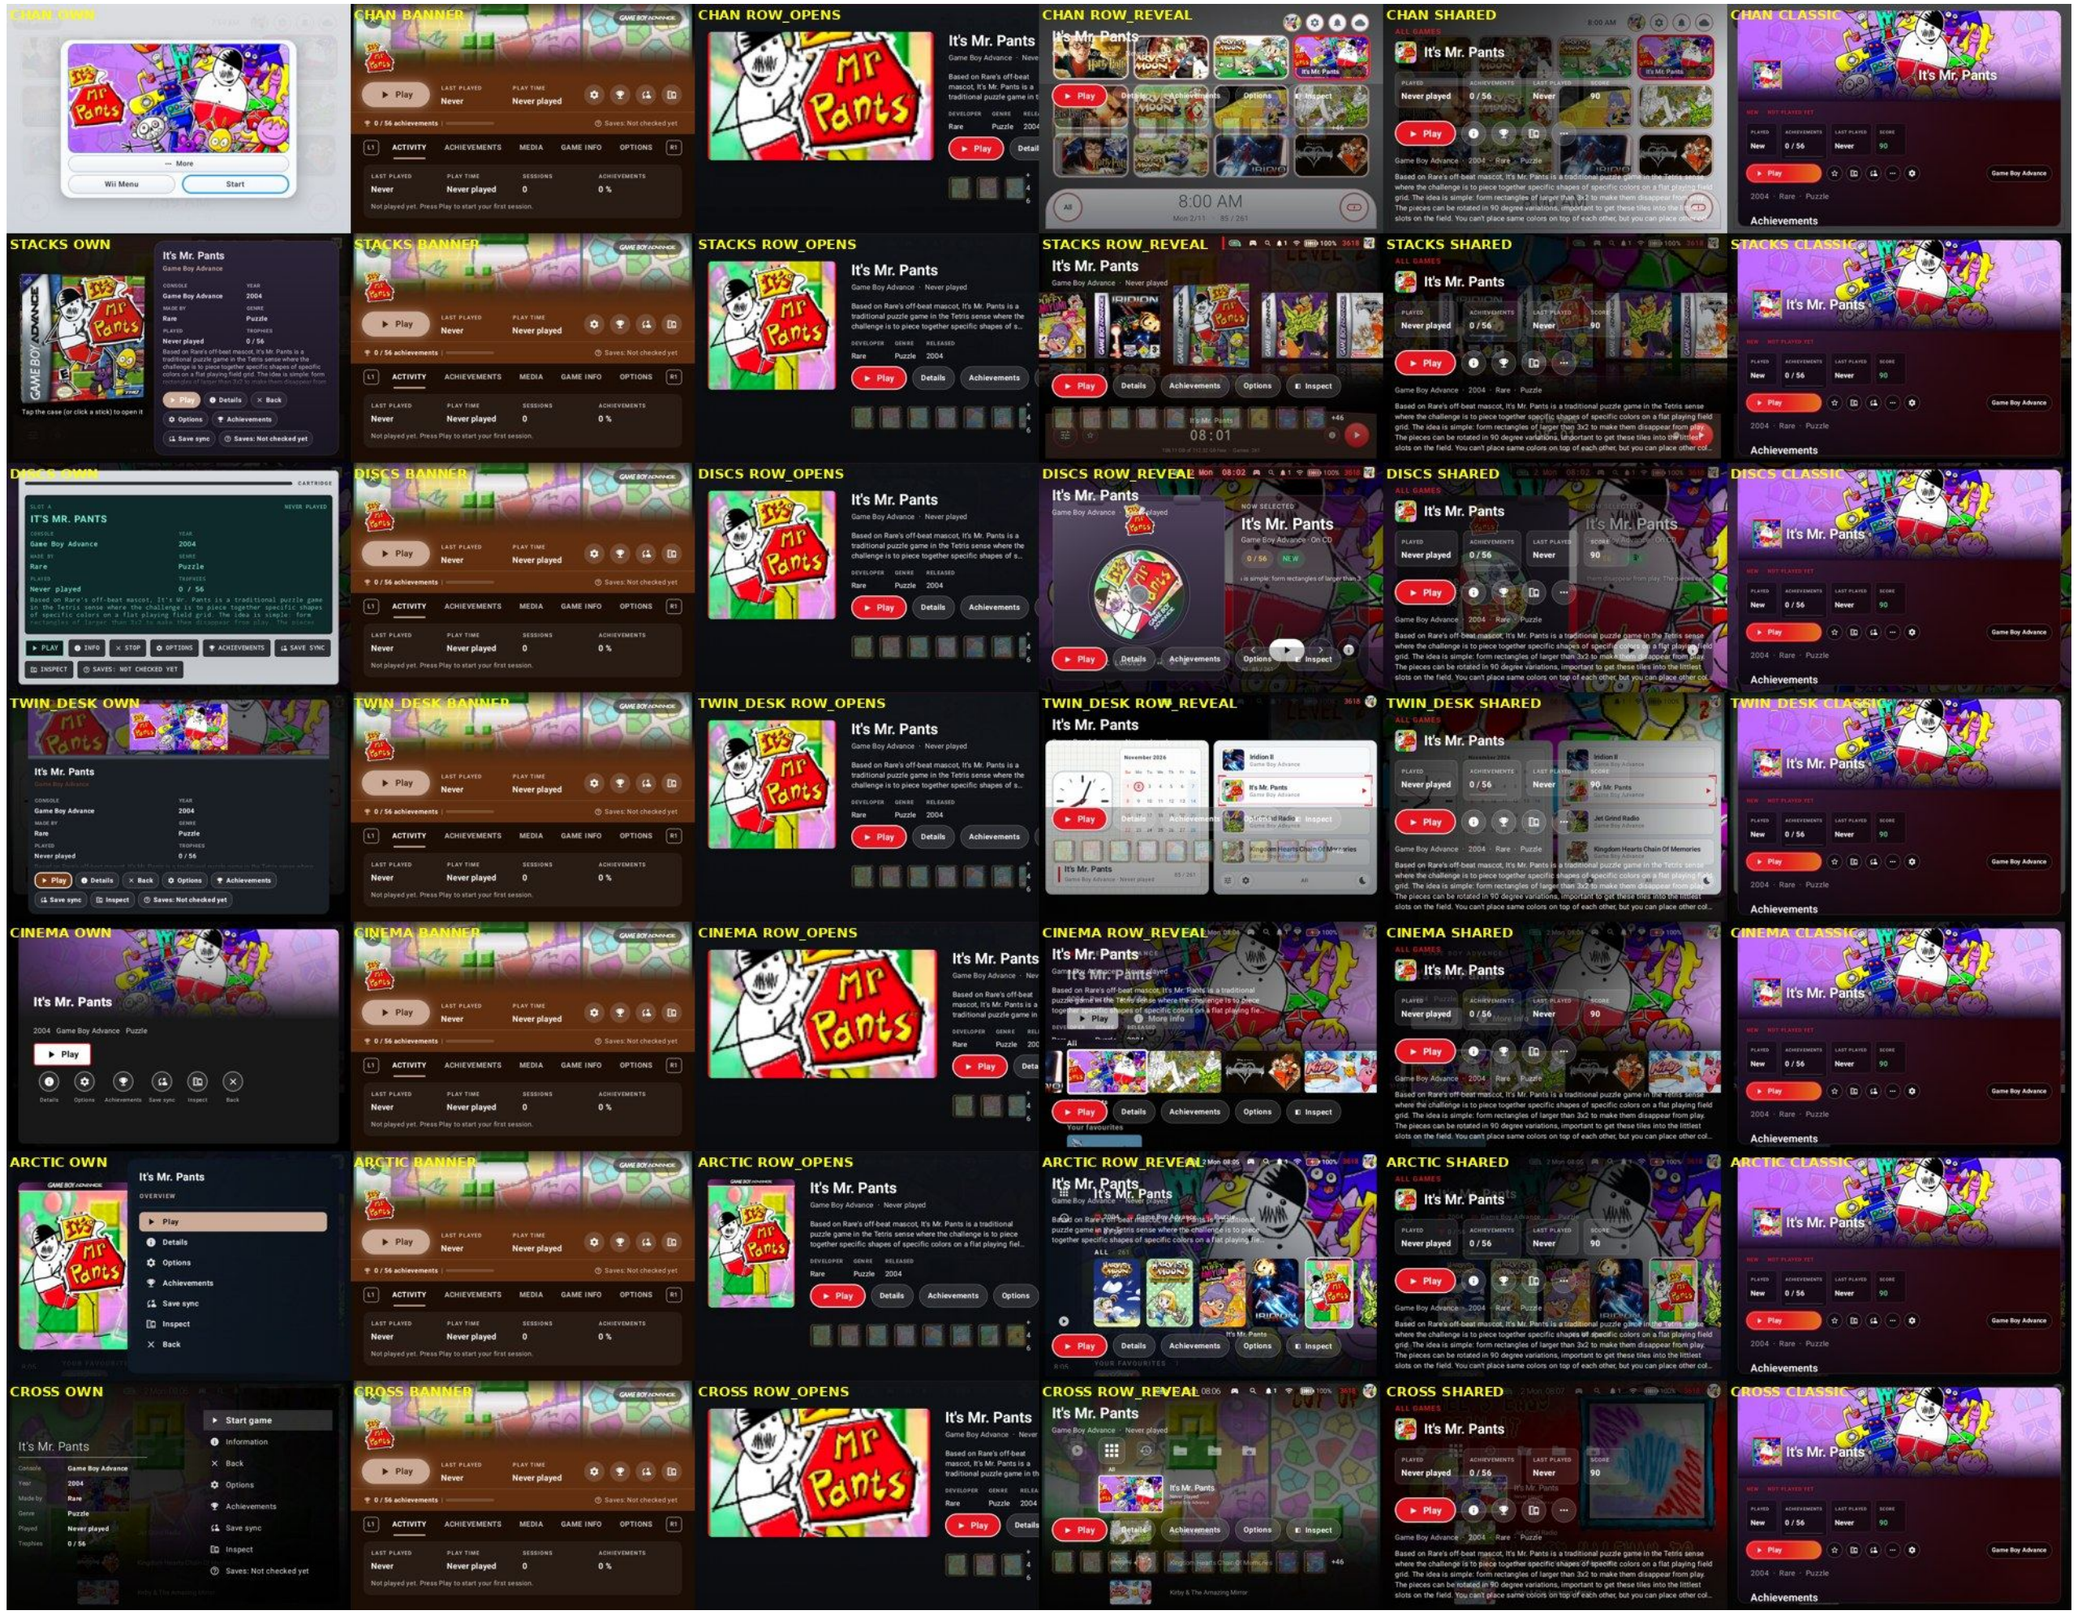

Layout / style	Rating	Notes (what is wrong → how it should look → code)
Wii Channel — Own	Excellent	Faithful Wii channel preview: banner crop-fills, More / Wii Menu / Start. Keep (WinScenesWii.kt).
Disc station — Own	Good	Player front panel + LCD matches the layout. The disc beside it turns during the showcase and shows its silver underside — the "generic disc" of D130 (by design: reading side). Could rest on the label side after the turn (MediaInspectView InspectMotion).
Case stacks — Own	Good	Index card beside the real case, case turns in the showcase. Physical continuity OK. Case-stack frame pacing on the GT78: see D137.
Arctic — Own	Excellent	Drawer with cover, overview and menu; clean on both screens.
Cross menu — Own	Excellent	Options column at the right, facts at the left — XMB-like, readable.
Cinema — Own	Good	Premiere layout good; icon row labels very small on the GT78 (WinScenes CinemaPremiere).
Twin desk — Own	Needs improvement	Hinge window on one screen (no 2nd screen fallback shown). Upper half: wide art with a small cover inset; GT78: last facts line cut under the keys. Should: facts take only the room left and scroll (WinScenesMore.kt TwinHinge). Attempted in 443, reverted (facts collapsed to 0 lines on the GT78).
Banner (all layouts)	Good	Same page for every layout by design. GT78: header art cropped to a band, four unlabelled round icons in the action row; dense but not clipped (GameWindowBanner.kt).
Row opens up	FIXED (was Broken)	Wide cards (Cinema, Channel) grew a cover over half the screen; text and buttons ran off the right edge on both devices, then (after the first fix) wrapped over the name. Now: cover ≤ 42 % width (shape kept), buttons wrap in the text column below the name (RowRevealWindow.kt).
Row reveal	FIXED (was Needs improvement)	On whole-screen layouts (Cinema, Arctic, Cross, Disc station) the layout's own title showed under the window's — the name twice. Now an 80 % shade covers the layout except the game's card (RowRevealWindow.kt). Channel grid: buttons still sit over the tiles (Needs improvement).
Shared move	FIXED (was Needs improvement)	GT78: story ran off the bottom edge with "…"; whole-screen layouts showed their title through. Now the story pans in the room left (no ellipsis) and those layouts are shaded 80 % (GlanceWindow.kt). Dense facts row stays.
Classic details	Good	Generic big details window by design; consistent on both screens.

D137 (GT78 Case stacks pacing): idle redraws come only from the background (black background: 0 slow frames idle). Fixed in 443: the carousel focus pulse re-composed the focused case 20×/s (now read while drawing), the animated scene holds its frame while the row glides (BackdropHold), corner visualizer colour reads. With the animated scene, frames over 33 ms per 6-move run went from 65-130 to 52-79; with the owner's gameplay-video background moves stay at 120-160 (video not paused — open). Measured with app-side QaTrace, not dumpsys gfxinfo.

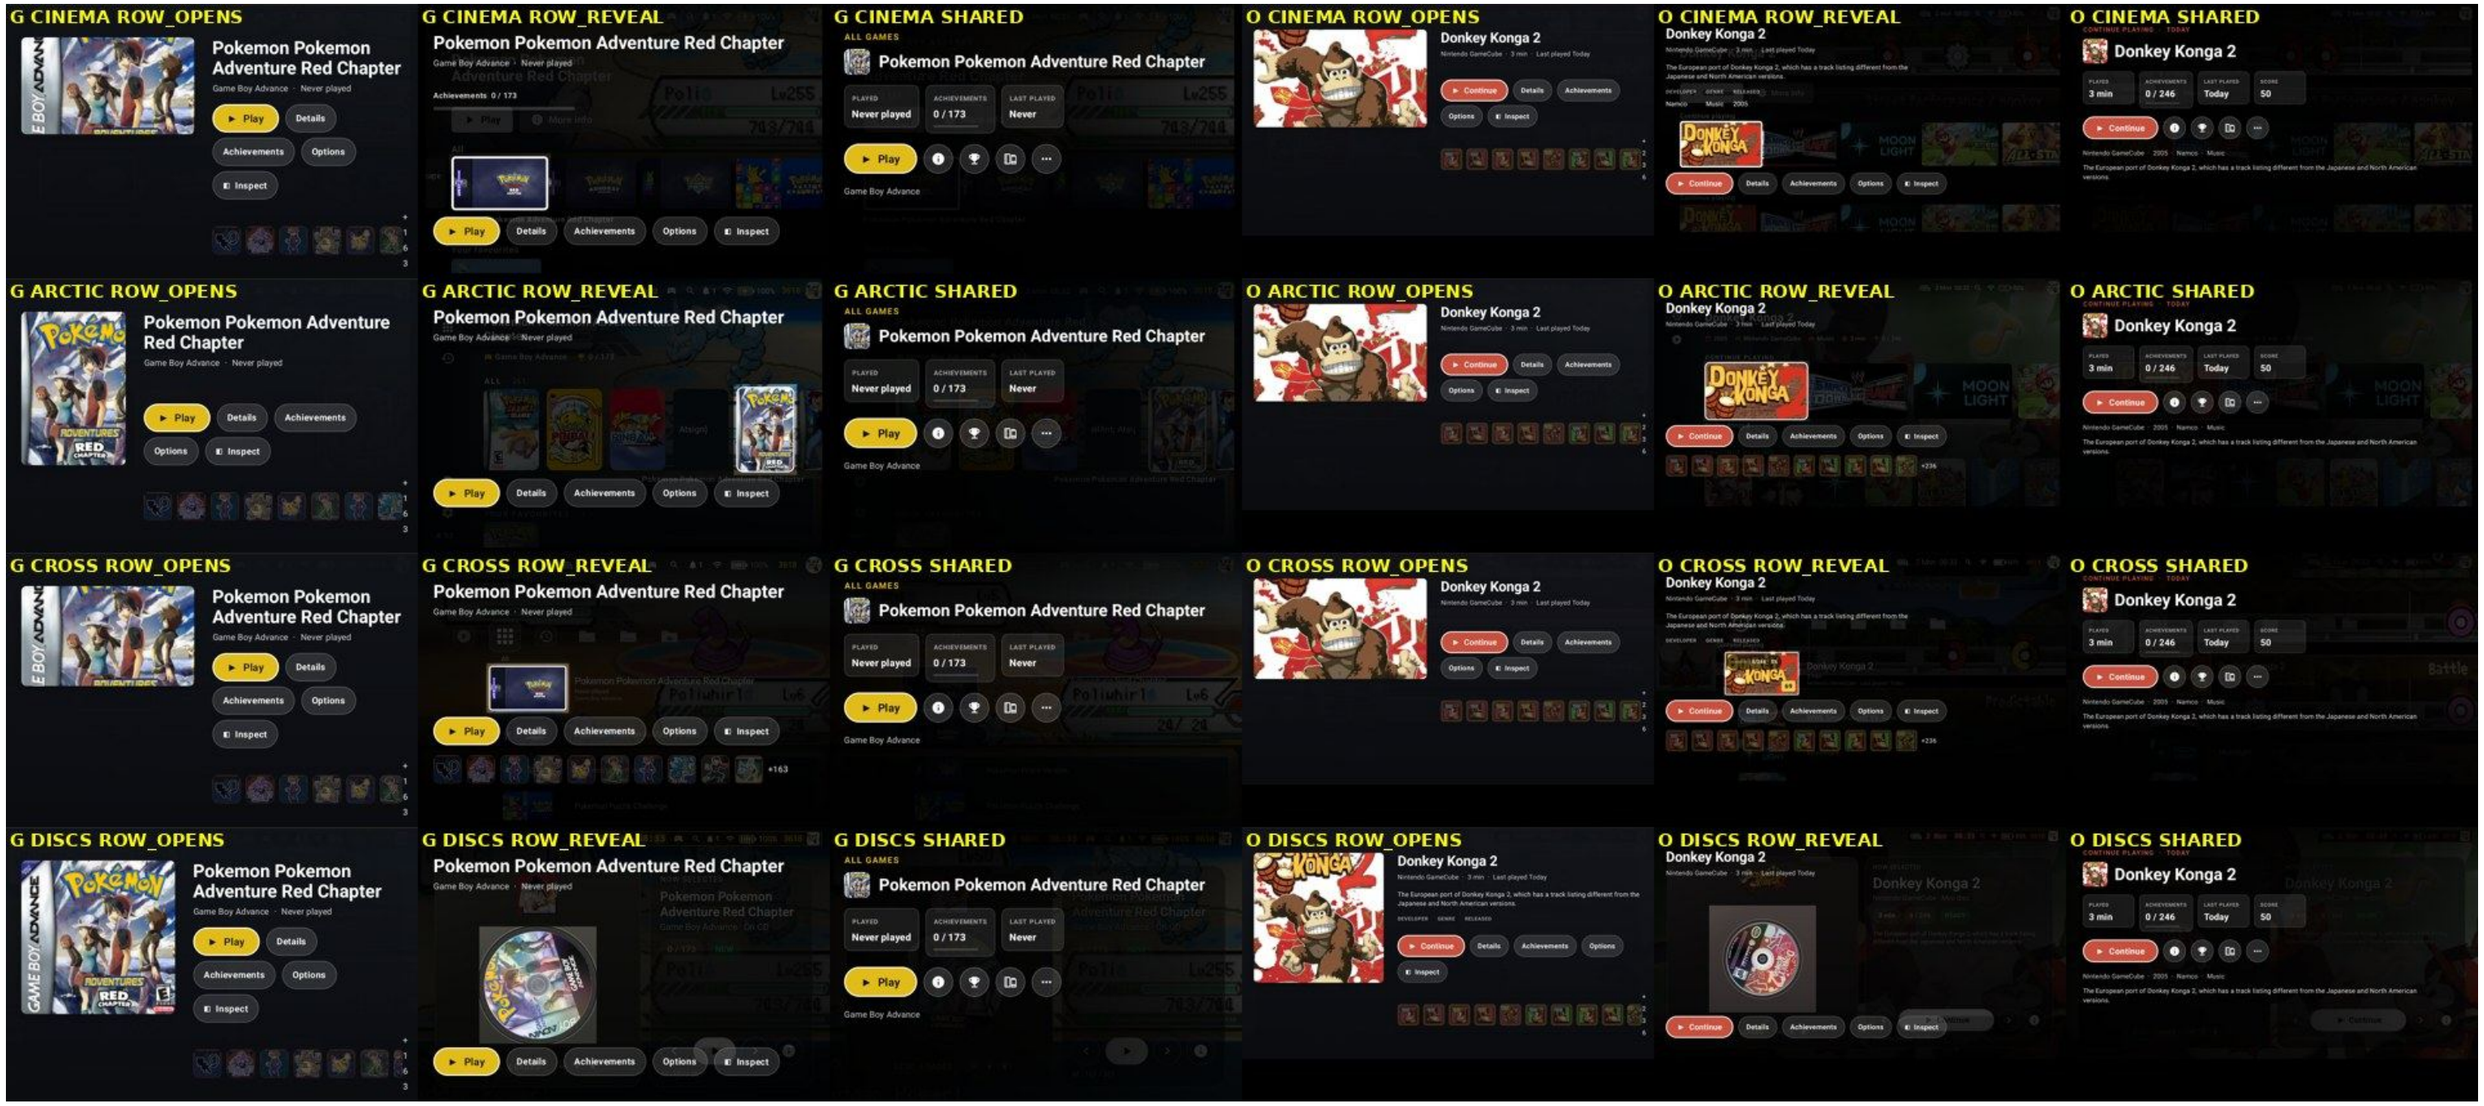

Settled windows — Odin, BEFORE fixes (row = layout, column = style)

Settled windows — GT78, BEFORE fixes

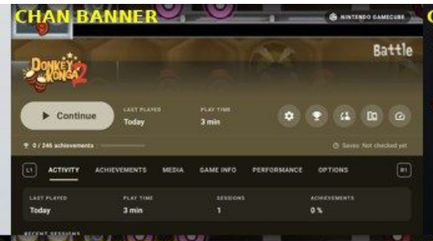

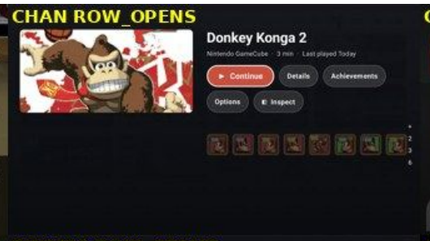

AFTER fixes — GT78 (G) and Odin (O): Row opens / Row reveal / Shared on whole-screen layouts

AFTER first pass — Odin (Channel grid recaptured; first Odin run hit the profile picker, D136)
